

WHY STAPLES?

- The staple system provides a quick, flexible and simple method of installing underfloor heating in a screeded floor
- Simple and quick to install pipe using handy pipe stapler
- Suitable for all screeded floors

PRODUCT DESCRIPTION

The pipe is easily held using staples. The staples have a barbed end which fixes into the insulation. To speed up the process further, a pipe stapler is available making installation even easier and faster.

In preparation for certain screeds and polythene sheet/membrane may be required over the insulation prior to stapling the pipe. Please seek advice from insulation and screeding manufacturer's/suppliers.

40(mm) staples are also available for thin insulation applications.

SPECIFICATION

Staple Dimensions: 40mm

Pipe: 13.2mm PE-RT

Pipe Centres: 133mm
